The Computer Literacy training program provides an easy-to-understand platform for students to grasp computer literacy concepts and skills. In this training series you will learn what you will need to know to be prepared to sit for the IC3 Digital Literacy GS6 Exams. IC3 Digital Literacy allows candidates to demonstrate their ability to select and use the appropriate research, productivity, collaboration, and communications tools, to find reliable information, create content, communicate safely, and identify credibility and bias in modern digital environments.

The new structure is a comprehensive set of stackable certifications across seven digital literacy domains. It is composed of three exams, each awarding its own certificate, that validate an understanding of each domain at the basic, intermediate, and advanced levels.

- Level 1 measures knowledge of fundamental concepts and essential components.
- Level 2 requires a working knowledge of each of the seven skill groups.
- Level 3 validates an advanced understanding of digital literacy and indicates that the candidate has the technical foundation needed to advance successfully along their educational and employment paths and support the development of more specialized technological skills.

The material is presented in a step-by- step manner, which will provide students with a hands-on experience. The course also includes practice exams, so you can test your skills at regular intervals throughout the material. Through these methods, you will learn essential introductory and advanced computer skills. Upon completion of this program, you will be prepared for the IC3 GS6 Certification exams. The IC3 GS6 certification is an industry-recognized credential that effectively validates one’s skills in computer literacy.

Note:
